SUMMARY

Motivated and adaptable third-year undergraduate pursuing a BSc (Hons) in Information Technology with a specialization in Data Science at SLIIT. Passionate about solving real-world problems at the intersection of machine learning, cloud architecture, and big data technologies. Strong foundation in data analytics, algorithm development, and scalable application design. Actively building hands-on expertise with cloud platforms, data pipelines, and ML frameworks.

Experience

As Intern Data Engineer (Cloud) - M3Force Pvt. Ltd

Building and maintaining data pipelines that move and transform data using cloud platforms (like AWS, Azure, or GCP) — setting up data storage, automating data flows (ETL/ELT), managing databases/data warehouses, and ensuring data is clean, reliable, and accessible for analytics or applications.

(2026)

Associate Web Blogger – WordPress

- Implemented SEO strategies that improved search rankings by over 50%.
- Published and managed blog content, engaging with a technical audience.

EDUCATION

Sri Lanka Institute Of Information Technology ..... 2023 — 2027

BSc (Hons) Information Technology, Data Science,

Currently pursuing with a CGPA of 3.22 / 4.00Completed a capstone project on predictive analytics

2021 GCE Advance Level (Technology Stream),

District Rank -204 Z Score - 1.14 ICT - C / SFT - B/ ET - C

SKILLS

Programming & Tools
Python, Java, C++, JavaScript, TypeScript, Kotlin, HTML, CSS, Sass
Web Development
React, Node.js, Express.js, MongoDB, MySQL, Firebase

Machine Learning & Data Science
Scikit-learn, TensorFlow, Kera's, PyTorch, NumPy, Pandas, OpenCV, NLP (spaCy, NLTK)
Data Visualization

Power BI, Tableau

SQL, PostgreSQL

Cloud Platforms

AWS, Azure, Google Cloud Platform (GCP)

Amazon Redshift Data Warehousing

Git, GitHub, Docker, Kubernetes

Apache Spark

Apache Hadoop For Big Data Handling

Aws Glue , Quick sight

Aws Athena

CERTIFICATIONS AND LICENSES

Azure Fundamentals,
Understanding Machine Learning,
Making ELT ETL Pipelines with Python,
AWS Cloud Practitioner Essentials,
Introduction For NLP And Text Mining,
Introductions For Docker,
Introduction For the Amazon RedShift, Python For Data Science

1. Personal Projects

AI Real State Recommended System

Tech Stack: Python, Stream lit, Scikit-learn, NLP
Engineered a recommendation system using collaborative filtering, content-based filtering, and deep learning. Delivered intelligent property suggestions based on user preferences and browsing patterns, enhancing the user discovery experience.

Agentic AI Healthy Lifestyle Advisor System

Healthy Lifestyle Advisor is an intelligent, multi-agent AI system that revolutionizes personal health management through the coordinated efforts of three specialized AI agents: Diet Agent, Fitness Agent, and Mental Health Agent. The system leverages cutting-edge technologies including YOLOv8 computer vision, RAG-powered chatbots, and RabbitMQ message queuing to provide real-time, personalized health coaching.

(Still not deployment in Cloud)

Public Health Inspections Predication System

Deployment Link -https://restauranthealthgradeprediction-system.streamlit.app

This project builds a machine-learning pipeline to predict NYC restaurant health grades (A, B, C, Z, N, P, Closed) from historical inspection data. We clean and transform 100K+ records (handling missing/duplicate entries, encoding categorical features, balancing classes) and evaluate multiple classifiers (Logistic Regression, Decision Tree, Random Forest, XGBoost). To reduce overfitting while keeping strong generalization, we select **Random Forest** as the final model and deploy it with a **Stream lit** front end for real-time, form-based predictions. The app supports three roles—**Health Authorities** (prioritize high-risk venues), **Restaurant Owners** (self-assessment & improvement tips), and **Customers** (grade lookup & safer dining choices). The system improves transparency, guides inspections, and helps stakeholders act on key risk factors like critical violations and inspection scores.

YouTube Trending Data Pipeline (on going project)

Data Pipeline ingests multi-region trending metadata, cleans it into bronze/silver/gold tables, and drives dashboards plus a simple next-24h forecast. Scope covers core ETL/ELT, KPI computation, and a baseline ML model; heavy NLP/graphs are out for MVP. It's idempotent, parameterized, backfill-ready, and enforces data quality with tests, drift alerts, and schema-change detection. Success is tracked via freshness, reliability, cost, dashboard adoption, and ML lift, with clear deliverables and mitigations for API quota, schema drift, and cos

HR Analytics Dashboard (Tableau Public) — Designer & Developer
Developed an interactive HR Analytics Dashboard to provide real-time workforce insights and support strategic decision-making. Designed dynamic visualizations to track key KPIs, including attrition, departmental performance trends, and employee demographic analysis. Applied visual storytelling to highlight retention

patterns, identify high-risk areas, and surface actionable insights. Dashboard published on Tableau Public to enhance accessibility and portfolio visibility.

Tech Stack: Tableau, Excel (data preparation), SQL (basic querying)
Focus Areas: Workforce planning, HR trends, data-driven decision support

Event-Driven Cloud ETL Pipeline

- Built a user-initiated ETL pipeline extracting data from external APIs, transforming it for analytics, and loading into Azure PostgreSQL
- Used Fast API for backend orchestration and implemented secure cloud-based credential management
- Focused on production-style data flow, separation of concerns, and cloud-native architecture

Link -https://github.com/chanukas-byte/Weather-Data-Pipe-Line-Project-ELT.git

Real-Time CDC Data Pipeline Project
Built an end-to-end real-time data engineering pipeline using MySQL, Debezium, Apache Kafka, AWS S3, AWS Glue, Athena, and Quick Sight. Captured insert, update, delete, and snapshot events from MySQL, stored raw CDC data in S3, transformed it into curated Parquet using Glue, queried it with Athena, and developed a Quick Sight dashboard for analytics and visualization

Cloud-Based Data Integration & Analytics System

Tech: Azure Data Factory, Azure Data Lake Gen2, Azure SQL Database, Power BI

- Built an automated ETL pipeline to integrate data from Excel files, SQL databases, and APIs.
- Implemented scheduled workflows using Azure Data Factory to eliminate manual data processing. • Created interactive Power BI dashboards for real-time analytics and business insights
